**2 )Write a program to calculate the area of a square. (Side is given)**

```java
import java.util.Scanner;
public class SquareArea
{
    public static void main(String[] args)
    {
        //uses input console
            Scanner sc=new Scanner(System.in);

            int side=0;

            System.out.println("Enter the Side :" );

            side=sc.nextInt();

        System.out.println("Area of a Square is :"+side*side);

        /* Using declared variable value */
        int s=13;
        int areaOfSquare=s*s;
        System.out.println("Area of the square="+areaOfSquare);
    }
}
```
